Data Engineer with 7+ years of experience building enterprise-scale data pipelines, operational ETL systems, and analytics platforms across healthcare, energy, and environmental sectors. Proven track record in designing data orchestration, automating ingestion and transformation workflows, and deploying robust observability for data quality and pipeline reliability. Skilled in Python, SQL, Dagster, and cloud-based architectures. Passionate about turning complex datasets into dependable business-ready data assets.

## EXPERIENCE

---

### Analytics Engineer V - Kaiser Permanente

Dec 2023 – Current

- Designed and deployed Dagster orchestration for end-to-end data pipelines, including ingestion, validation, transformation, and downstream delivery to analytics datasets
- Built reusable Python and SQL pipeline operators that support recurring ETL jobs, reducing manual intervention and improving data reliability across claims and operational feeds
- Implemented production observability and alerting for pipeline failures using Dagster metadata, logging, and schedule monitoring
- Automated X12 data formatting through Python conversion, saving approximately \$250k/year by removing manual work and standardizing delivery
- Created internal packages to standardize team data engineering processes, improve onboarding, and accelerate cross-team collaboration

### Analytics Engineer IV - Kaiser Permanente

Apr 2022 – Dec 2023

- Spearheaded migration of legacy web apps to R Shiny, improving performance and maintainability.
- Automated document generation workflows using R and Python, eliminating 40+ hours of manual work monthly.
- Developed reusable R and Python packages to standardize analytics and data processing workflows across teams.

### BI Engineer - Wavicle Data Solutions

Dec 2021 – Apr 2022

- Provided leadership in team development environment and earned AWS certifications.
- Optimized and documented large R script code base for client, improving maintainability.
- Maintained and debugged R Shiny application in server environment.

### Data Analyst - CLEAResult

Jun 2021 – Dec 2021

- Conducted economic analysis and provided insights for energy-related projects.
- Created and maintained dashboards in Power BI, including updates to star schemas.
- Developed R packages for internal use to streamline ongoing analyses.

### Data Analyst - Cadmus Group

Mar 2020 – Jun 2021

- Developed R Shiny applications for modeled EV adoption and energy use
- Converted Excel-based economic model into an R package with efficiency and speed gains
- Led use of Python model for solar adoption project in DataBricks environment

### Research Assistant - Schatz Energy Research Center

Aug 2017 – Mar 2020

- Built JavaScript web tool to display project results, meeting project scope requirements
- Wrote and maintained R code for parallel processing of large spatial datasets
- Generated spatial analyses of wind generation potential for use in public presentations and discussions

## EDUCATION

---

Humboldt State University, MS Environmental Sciences

2017 – 2019

Portland State University, GIS Certificate

2015 – 2016

Oregon State University, BS Natural Resource Management

2011 – 2014

## SKILLS

---

- Programming Languages: Python, SQL, R, JavaScript, Bash, Go
- Databases: SQL Server, Postgres/PostGIS, Oracle, SQLite, Prometheus
- Version Control: GitHub, GitLab
- OS: Windows, Linux

- Cloud Services: AWS, DigitalOcean
- ETL & Orchestration: Dagster, Alteryx, Databricks
